Aeration Air Flow Meter
Series 410FTB

The Kurz 410FTB flow meter is specifically designed to monitor aeration air flow in water and wastewater treatment facilities. Its response time to velocity changes coupled with its low noise signal allow for the highest control of dissolved oxygen (DO). By improving DO control in aeration basins, significant improvements in energy efficiency are realized. The 410FTB includes the following qualities and features:

- The fastest, lowest noise response to velocity changes in the industry.
- The highest repeatability, accuracy, and reliability available.
- Constant temperature thermal technology.
- No requirement for flow conditioners or minimum upstream metering runs for aeration applications.
- Interchangeable sensor and electronics (single circuit board) — no matched sets.
- Continuous self-monitoring electronics that verify the integrity of sensor wiring and measurements.
- Zero velocity as a valid data point.
- Sensor does not overheat at zero flow by using a unique constant temperature control method and power limiting design.
- Completely field configurable using the local user interface or via a computer connection.
- Supports HART, Profibus DP, and Modbus communication protocols.
- Velocity dependent correction factors for dynamic flow profiles.
- Sensor Blockage Correction Factor (SBCF).
- Flexibility with transmitter-attached or transmitter-separate designs.
- Patented digital sensor control circuit (US 7,418,878).
**SPECIFICATIONS**

- **Velocity range**
  0 to 12,000 SFPM (56 NMPS)
- **Velocity (v) accuracy**
  (SFPM at laboratory conditions)
  \( \pm (1 + 2000/v) \% \) of reading
- **< 0.21\% reading repeatability**
- **Response time (t_{63})**
  0.18 seconds to 63 \% of final value
- **Noise (coefficient of variation)**
  0.2 \%
- **Temperature accuracy**
  \( \pm (0.5 \% \) of reading +1 °C) for velocities above 100 SFPM
- **Electronics operating temperature**
  Integral display
  -13 °F to 149 °F (‐25 °C to 65 °C)
  Remote aluminum enclosure
  -40 °F to 149 °F (‐40 °C to 65 °C)
  Remote polycarbonate enclosure
  -13 °F to 149 °F (‐25 °C to 65 °C)

**PROCESS CONDITIONS**

- **Process pressure rating**
  Up to 50 PSIG (345 kPag)
- **Process temperature rating**
  -40 °F to 257 °F (-40 °C to 125 °C)
- **Installation requirement**
  The flow meter should be placed 3 line diameters or more upstream of the flow control valve

**CERTIFICATES & COMPLIANCES**

- **Industrial Safety for Electrical Equipment**
  IEC/CSA/UL 61010-1
- **European Union CE compliance**
  EMC, LVD, PED, ROHS, and WEEE
- **NAMUR Signaling Standard NE43**
  Compliant 4-20 mA Outputs
- **Based on SIL design**

**TRANSMITTER FEATURES**

- **Aluminum (Type 4X, IP66) dual chamber polyester powder-coated enclosure**
- **Adjustable display/keypad orientation**
- **Optically-isolated loop powered 4-20 mA output (±48 VDC isolation)**
  12-bit resolution and accuracy
  Maximum loop resistance is 300 Ω at 18 VDC, 550 Ω at 24 VDC, 1400 Ω at 36 VDC
- **Input power**
  AC (85-264 V 50/60 Hz, 24 watts max.)
  or DC (24 V ±10 %, 1 A max.)
- **Integral or remote user interface**
- **Easy-to-use interface**
  Backlit display / keypad
  2-lines of 16-characters each
- **User-configurable flow display**
  (scrolling or static)
- **User-configurable English or metric units for mass flow rate, mass velocity, and process temperature**
  °C, °F, KGH, KGM, NCMH, NLPM, NMPS, PPD, PPH, PPM, SCFH, SCFM, SCMH, SFPM, SLP, SMPS
- **Velocity-dependent correction factors for dynamic flow profiles**
- **Built-in zero-mid-span drift check**
- **Built-in flow totalizers and elapsed time**
- **User-configurable digital filtering from 0 to 600 seconds**
- **Configuration/data access**
  USB or RS-485 Modbus (ASCII or RTU)
- **Meter memory**
  200 recent events, top 20 min/max, and 56 hours (10 second samples of trends)
- **3-year warranty**

**SUPPORT & ELEMENT COMPONENTS**

- **Sensor material**
  Wetted sensor surfaces:
  SiO₂ glass, silicon rubber, 316L
- **Sensor support**
  316L stainless steel
- **Sensor support diameter**
  3/4” (19.05 mm)
- **Sensor support length**
  12” to 36” (305 mm or 914 mm)
- **3-year warranty**

**OPTIONS**

- **Enclosures**
  Aluminum or remote-only polycarbonate wall mount
- **One 4-20 mA non-isolated analog input**
- **Digital input dedicated to zero-mid-span drift check**
- **Two optically isolated solid-state relays / alarms**
  Configurable as alarm outputs or pulsed totalizer output
- **Pulsed output as a remote flow totalizer**
- **Flow valve PID controller and configurable control application**
  Permits controlling set point velocity or flow rate through available control valve, damper, or 4-20 mA interface
- **Hardware accessories**
  Available hardware includes flanges, ball valves, restraints, retractor, cable glands, conduit seals, cable, compression fittings, packing glands, and branch fittings
- **Communication protocols**
  RS-485 Modbus (ASCII or RTU), HART (v7 FSK) and PROFIBUS DP
ANALOG & DIGITAL INPUTS & OUTPUTS

All options include USB interface with ASCII text and Modbus protocol through RS-485.

The 4-20 mA analog outputs (AO) are used for flow rate and/or temperature, or one AO for PID flow control. All AO are NAMUR NE-43 compliant. Feature 9 option 42 (Standard) has AO1 that updates at a 15 Hz rate to support tighter flow loop control. Feature 9 options 45, 46 (HART) and 48 (Profibus) have AOs that update at the standard 4 Hz rate.

Relay digital outputs (DO) can be alarms, EPA zero-mid-span drift is active, or pulsed totalizer function. PID uses one 4-20 mA output for flow control (motor speed, valve position, pressure, etc.). The EPA zero-mid-span drift check requires a contact closure to start the drift check. All 4-20 mA outputs are used during the Drift Check Calibration process.

EPA zero-mid-span drift check can be initiated using digital inputs (DI), elapsed runtime automatic drift check, Modbus, or HART.

The 4-20 mA analog input (AI) supports feedback to the device.
NOTES:

1. FOR FLANGED OPTION \( L = (U + L_2 - 1.23) [31.24 \text{ mm}] \)
   \( U \) (MIN.) = 4.00 [101.6 mm]
2. \( L_2 \) (MIN.) = 5.00 [127.0 mm]
3. THIS PROBE CONFIGURATION ALSO USED FOR DIRECTLY ATTACHED, DC POWERED, NO DISPLAY
4. SENSOR WIRE TERMINAL JUNCTION BOX USED FOR SENSOR ELECTRONICS FOR DC POWERED, NO DISPLAY
5. ENCLOSURE STYLES AND DIMENSIONS ARE SUBJECT TO CHANGE
